

Using SpeakUp as a LTI tool in a LMS

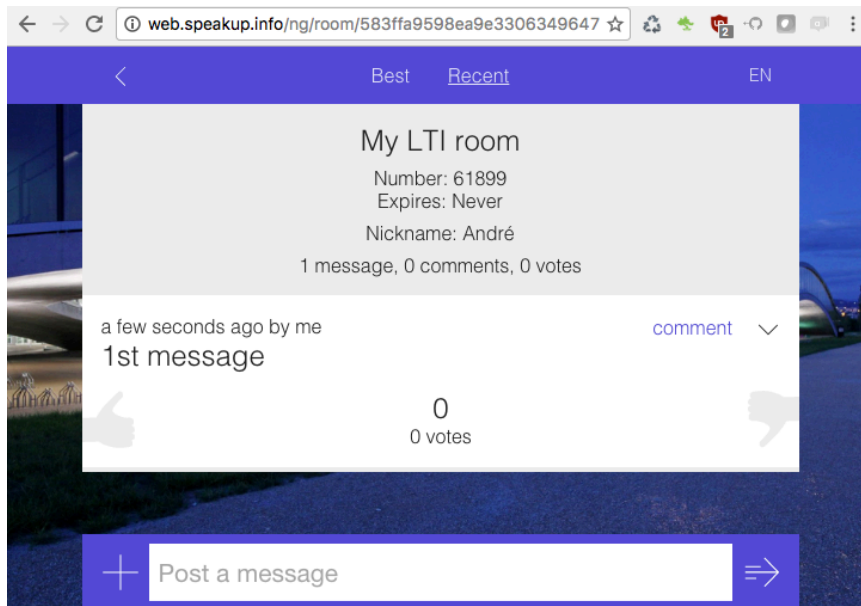

Access <http://web.speakup.info/> and create a room:

If the room creator toggled **nicknames** he/she will be immediately prompted to enter a nickname:

After that the room is ready:

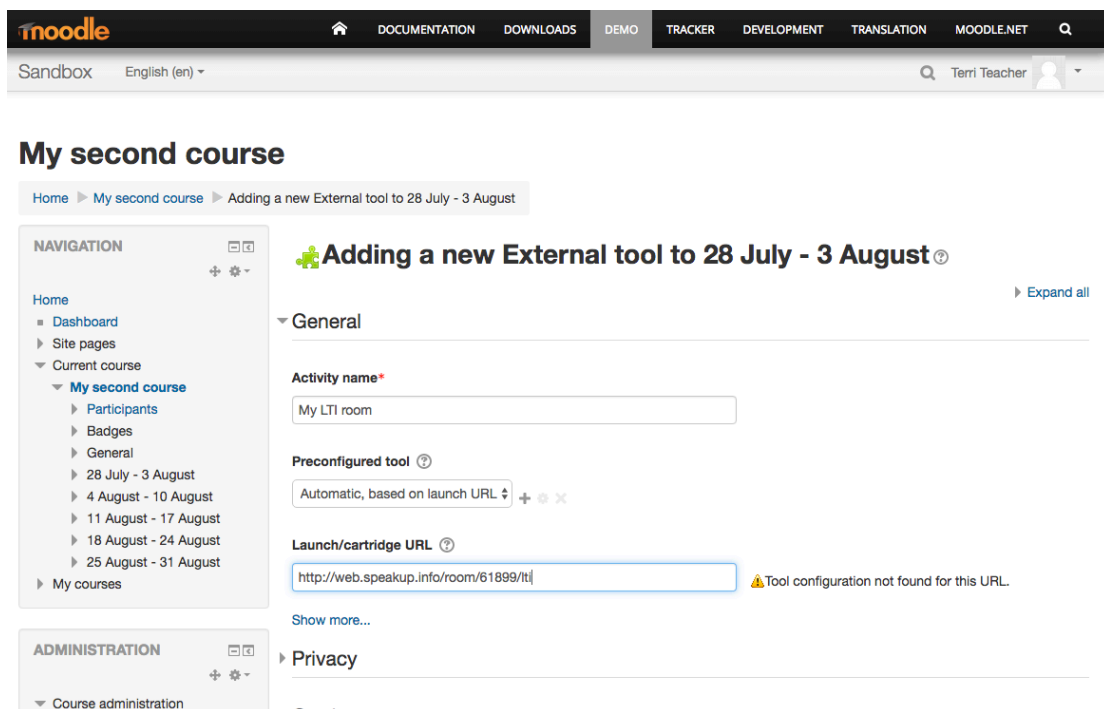

With the room number, it's now possible to build the link to access it using LTI:

<http://web.speakup.info/room/<room-number>/lti>

In this example room number is: **61899**

With this link one can go to the LMS (Moodle in the screenshot) and use it:

This site will be reset in 28 mins 19 secs

Since the speakup room creator toggled **nicknames**, when the room is accessed through LTI, speakup will try to fetch the user's name(s) from the LTI request to build up a nickname (fields: lis_person_name_full, lis_person_name_given, lis_person_name_family), that's why in the image above it's set as Terri Teacher, which matches the moodle user. If not present, the user will be prompted to type it (second image).

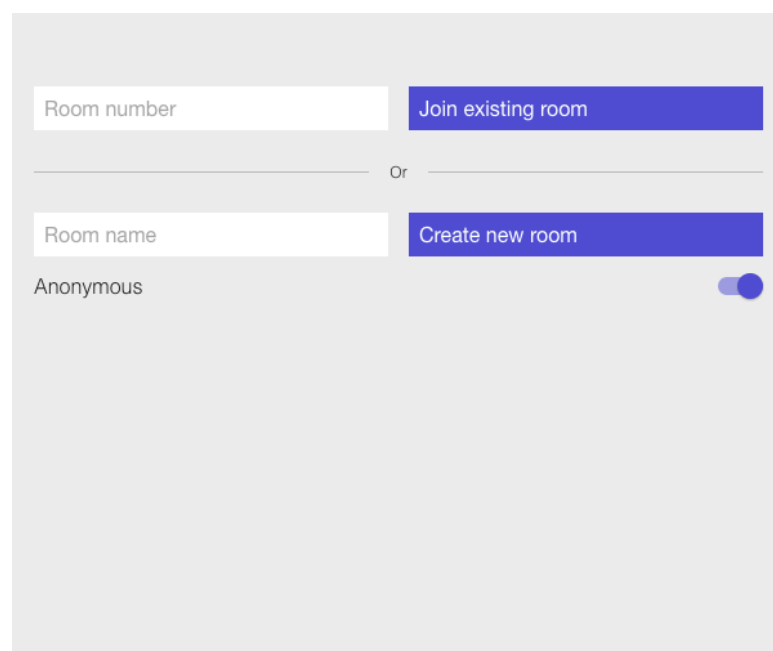

Using SpeakUp as an app in ILS

In an ILS, add a new app by typing in the speakup app url:
<http://shindig2.epfl.ch/gadget/prod/speakup/speakup.xml>
(It will be available in the “Select app” dropdown soon)

The screenshot shows a web interface titled "Discussion" with a dropdown arrow. Below the title, it says "This is the Discussion phase." and has a "Back" button. Under the heading "New App from URL", there are two options: "Add App" and "or choose an app from Go-Lab". The "Add App" option has a text input field containing "Speakup Room" and a URL input field containing "http://shindig2.epfl.ch/gadget/prod/speakup/spe". Below these is a green "Add App" button. The "or choose an app from Go-Lab" option has a "Select app" dropdown menu. At the bottom, there is a text area with the instruction "Add content by pressing the + or simply drag-and-drop resources here".

After that open the app and create or join a room:

The screenshot shows a form for creating or joining a room. It has two main sections separated by an "Or" label. The top section has a "Room number" input field and a "Join existing room" button. The bottom section has a "Room name" input field and a "Create new room" button. At the bottom, there is a toggle switch labeled "Anonymous" which is currently turned on.

Disabling the **anonymous** will make speakup use the graasp user's name as the user's nickname in the room.

After this the ILS is ready to be accessed through the standalone view, and will show the room created/joined just before:
